**[Urgent Statement]**

**Expansion Plan of Cirebon Coal-fired Power Plant Project in West Java, Indonesia;  
Regional Court Revokes the Environmental Permit**

**JBIC Must Immediately Review and Repeal its Loan Agreement for the Illegal Project!**

--- Japanese Groups Strongly Object to JBIC Premature Decision to Provide Financing, Ignoring  
the Judicial Decision in the Host Country ---

Following objections from local affected villagers, the regional court in Bandung, West Java, has revoked the environmental permit for 1000MW Cirebon coal-fired power plant expansion plan (which Marubeni and JERA invested in), known as Cirebon 2 on April 19.

Japan Bank for International Cooperation (JBIC) already concluded a loan agreement for Cirebon 2 on April 18 the day immediately before the court verdict was due.<sup>1</sup> JBIC, however, must sincerely take it into account the local villagers' rights and the judicial decision in the host country, and must immediately review and repeal its decision to provide financing for Cirebon 2, as the project is illegal according to the local law and in violation of the "JBIC Guidelines for Confirmation of Environmental and Social Considerations" (Guidelines) which require *"the compliance with environmental laws of the host nation and local governments concerned"* and *"the submission of environmental permit certificates issued by the host governments."*

The JBIC's decision to finance Cirebon 2 was made on the day immediately before the regional court's verdict for the administrative court case, which is very crucial because it argues the illegality of the project, or the cancellation of environmental permit for Cirebon 2. JBIC confirmed in its own response in the Diet on April 13 that it had recognized the progress of this court case.<sup>2</sup> Thus, JBIC's

<sup>2</sup> Mr. Kondo, JBIC Governor, answered to the interpellation by Mr. Mikishi Daimon, a parliament member, in the finance committee, House of Councilors on April 13, 2017. (<http://www.webtv.sangiin.go.jp/webtv/index.php>) (only

decision which didn't wait for the court's verdict is in clear violation of local people's rights and the judicial decision in the host country. In addition, the decision to finance Cirebon 2 was made even though it was still impossible for JBIC to clearly confirm on the compliance with the above-mentioned stipulation of JBIC Guidelines. We express our strong and serious objection against JBIC's premature decision to finance Cirebon 2, which prioritises the company's profit over the local people's rights, whilst obviously ignoring a judicial decision in the host country and its own guidelines.

In Cirebon coal-fired power plant project, the currently operational Unit 1 plant (660 MW which Marubeni invested in), for which JBIC already provided its loan, has already caused numerous environmental and social impacts. A formal objection against JBIC was submitted last November 2016 by the local villagers who had lost their livelihood and income opportunity, such as small-scale fisheries, shellfish picking, salt-making, and farming, and who were concerned about deteriorating of health conditions due to air pollution.<sup>3</sup> Effective countermeasures, however, for such impacts by the existing power plant have still not been put in place and the local villagers are still having in the difficulty with serious problems.<sup>4</sup> The local villagers have demanded the cancellation of Cirebon 2, as they are concerned that the damages to their life would get worse if the expansion plan of Unit 2 plant is pushed through.

Six (6) villagers became the plaintiffs and filed the administrative court case last December 2016, pointing out the illegality in several environment-related laws, such as a lack of amendment in the Cirebon Regency's spatial plan, which is necessary to push through the current plan of expansion, as well as a failure to appropriately engage the community in the process to develop Environmental Impact Assessment (EIA). The West Java government was also accused of inappropriately issuing the environment permit (No. 660/10/19.1.02.0/BPMPT/2016. Issued on May 11, 2016), with the plaintiffs demanding its cancellation.

JBIC decided its finance with total amount of USD 3,730 million within one year for two other controversial projects in Indonesia, namely Batan coal-fired power plant project in Central Java (2,000 MW) which has caused serious human rights violations,<sup>5</sup> and Tanjung Jati B re-expansion coal-fired power plant project in Central Java (Unit 5 and 6 with 2,000 MW), from which French commercial banks withdrew from the bank consortium in line with their commitments to reduce coal finance.<sup>6</sup> Regarding Cirebon 2 for which JBIC has just decided to make a loan agreement, a French bank, Credit Agricole, has withdrawn for the same reason. Countries all over the world have

urged the Japanese government to immediately reject funding of Cirebon 2 as such funding will undermine global efforts to dramatically decrease carbon emissions in line with the Paris Agreement.<sup>7</sup>

Japanese government and JBIC must immediately review and repeal its decision to finance Cirebon 2, carefully listening to the voices of the local community and the civil society in domestic and abroad and sincerely recognizing the recent judicial decision in the host country and the international trend of divestment from coal-related projects. So that the local community's life and social environment could not get worse any more.
